

Netrio Managed IT and Cybersecurity Services

Technology Strategy and Execution for Private Equity and Portfolio Companies

Overview

Private equity firms and their portfolio companies rely on dependable technology and cybersecurity to keep operations running smoothly, data secure, and costs predictable so they can focus on value drivers and growth. Netrio delivers that predictability and peace of mind every day.

We manage technology platforms and cybersecurity for more than 1,000 companies worldwide, giving us the scale, systems, and experience to execute — not just advise. Our team designs, integrates, and manages secure, stable, standardized environments that lower operating costs, reduce risk, and eliminate the chaos of fragmented systems, while building a scalable roadmap for future growth.

When you partner with Netrio, you gain a single accountable team that keeps your technology simple, secure, and efficient — and on the fast track to growth.

Specializations

Netrio provides a complete suite of services ranging from managed IT, cybersecurity operations, and governance to custom application development, cloud, networking, collaboration, and voice. For the private equity community and their portfolio communities, we offer specialized solutions including the following:

- **Managed IT:** We handle daily IT operations for portfolio companies — monitoring, patching, user support, and system performance — all backed by defined service levels. Your teams stay productive while we handle the technical load.
- **Cybersecurity Operations:** Our 24/7 Security Operations Center and Governance Team detects and responds to threats in real time. We manage compliance, vulnerability scanning, and incident response so your companies stay protected and audit-ready, while our vCISO services give you the strategic vision and direction to design a cybersecurity framework and policies for the long term.
- **IT and AI Strategy:** From how to adopt AI effectively to defining the systems and workflows you need to achieve your business goals, Netrio can help you plot the right technology roadmap and then collaborate with your team to execute.
- **IT Due Diligence:** We evaluate infrastructure, risks, and costs before acquisition and can support you with ongoing IT management long after the deal has closed. Our assessments uncover hidden technical debt and integration challenges early so there are no surprises post-close, and then we deliver a plan of action that is 100% ready for execution.
- **Integration and Standardization:** We bring portfolio companies onto consistent, cost-efficient platforms — standardizing email, security, networks, and cloud services. The result: fewer vendors, simpler management, and predictable costs across entities.

Turning Technology from a Roadblock to an Accelerator

Challenge

Rising IT and security costs

Multiple vendors and tools

Limited internal IT capacity

Inconsistent standards across companies

Cybersecurity risk and compliance exposure

Netrio Delivers

Consolidated services that reduce total spend leveraging automation and AI

One accountable provider with unified oversight

Fully managed operations with experienced staff

Standardized environments with proven playbooks

Continuous monitoring and incident response

The Netrio Advantage

At Netrio, we focus on execution. Our teams don't write reports for someone else to implement — we do the work. We operate as an extension of your organization, bringing structure, visibility, and accountability to IT and cybersecurity, and the results speak for themselves:

- **1,000+ companies managed globally**
- **Lower IT overhead** through vendor consolidation, automation, and AI
- **Faster post-acquisition integration** means standard environments in weeks, not months
- **Reduced downtime and incidents** via proactive monitoring, automated resolution, and patching
- **Predictable monthly costs** with transparent reporting

Whether you manage five portfolio companies or fifty, Netrio provides a consistent, scalable way to secure and support them all.
