

# DOING ORDINARY CLOUD & INFRASTRUCTURE EXTRAORDINARILY

## MANAGED CLOUD & INFRASTRUCTURE BUILT FOR RESILIENCE, PERFORMANCE, AND SCALE

Today's organizations need cloud and infrastructure environments that are available, secure, optimized, recoverable, and ready to support business growth. They can't rely on basic hosting or one-off cloud projects anymore.

With Netrio, organizations can modernize cloud and infrastructure operations without adding unnecessary complexity.

Netrio's Cloud & Infrastructure services bring together cloud operations, resiliency planning, platform support, and cloud security oversight into a model designed to modernize organizations without adding complexity.

Whether your environment is public, private, hybrid, or still evolving, Netrio helps keep infrastructure aligned to business priorities.

At Netrio, we help organizations do the **ordinary extraordinary**, and that means building stronger, more resilient technology foundations, too.

## WHAT NETRIO CLOUD & INFRASTRUCTURE SOLVES

Cloud and infrastructure environments become harder to manage as organizations grow. Workloads spread across platforms. Backup and recovery plans fall from the priority list. Applications run on unoptimized infrastructure. Identity and cloud security risks increase. Over time, these issues impact uptime, cost control, recoverability, and scalability.

Netrio helps organizations create a more reliable, resilient, and scalable foundation, providing:

- ✓ **Public, private, and hybrid cloud** management aligned to business needs
- ✓ **Backup, disaster recovery (DR), and continuity planning**
- ✓ **Managed infrastructure** and platform services
- ✓ **Cloud and identity** security oversight

## NETRIO'S CLOUD & INFRASTRUCTURE SERVICES

### CLOUD MANAGEMENT

Cloud environments create opportunity, but also introduce complexity. Netrio helps organizations manage public, private, and hybrid environments with greater consistency, control, and confidence. Service areas include:

- ✓ Public Cloud Management
- ✓ Private Cloud Hosting
- ✓ Hybrid Cloud Integration

### DATA PROTECTION & RESILIENCY

Disruption comes in many forms — from cyber risk and human error to infrastructure failure. Netrio helps strengthen backup readiness, improve recovery planning, and build a more disciplined continuity strategy. Service areas include:

- ✓ Cloud Backup & Recovery
- ✓ Disaster Recovery as a Service (DRaaS)
- ✓ Business Continuity Planning

### PLATFORM & APPLICATION

Infrastructure delivers more value when it supports the platforms, applications, and databases that run daily operations. Netrio helps strengthen the systems that sit between infrastructure and everyday operations. Service areas include:

- ✓ Infrastructure-as-a-Service (IaaS)
- ✓ Application Development & Integration
- ✓ Database Management

### CLOUD & IDENTITY SECURITY

As cloud environments grow, so does the attack surface around misconfigurations, identity misuse, and access-related threats. Netrio helps improve visibility, strengthen controls, and respond more effectively to cloud and identity risk. Service areas include:

- ✓ Cloud Security Posture Management (CSPM)
- ✓ Identity Threat Detection & Response (ITDR)

### DOING THE ORDINARY EXTRAORDINARY WITH NETRIO

When cloud and infrastructure are managed proactively, the impact extends across the business. Performance becomes more consistent. Recovery readiness improves. Security and governance grow easier to maintain. Internal IT teams spend less time reacting to issues and more time supporting transformation, innovation, and business-facing priorities.

Netrio combines operational execution, cloud expertise, resiliency planning, platform support, and security oversight to help cloud and infrastructure become a stronger business enabler.

Modernize your Cloud & Infrastructure environment with an MSP built for monitoring, visibility, and proactive risk reduction.
